## SPECIFICATION FOR THE APPLICATION OF CICLO FIREBLOCK® EU

Painting of (1)\_\_\_\_\_

The treatment will be made by (2)\_\_\_\_\_ application of fire retardant painting cycle called CICLO FIREBLOCK® EU.

The application cycle provides the following procedures:

### 1) PREPARATION OF THE SURFACES

Verify that the materials to protect are free of grease, fats, oil, waxy impregnating and preexisting varnishes. Existing paint coats must be removed by sandblasting or by sandpapering with coarse grain and then fine abrasive paper at naked wood.

After this operation, in order to ensure maximum adherence of fire retardant cycle on the support, carry out further cleaning using a dampened cloth with nitro thinner to remove completely from wood traces of wax.

It should be checked carefully that the humidity of the wooden materials to coated is less than the value of 12% in weight.

If the conditions of preparation above indicated are not respected, we don't give any guarantee of durability of treatment.

### 2) WATER BASED IMPREGNATING AGENT FOR WOOD

Application of our product STARWOOD/W, water based primer, in amount of 80-100 g/m<sup>2</sup> in order to confer resistance to mold and pests of wood (this treatment should be done on naked wood). The product is supplied in transparent or colored version.

### 3) FIRE RETARDANT PAINTING CYCLE

Application of one coat of varnish FIREBLOCK EU with a consumption of 150 g/m<sup>2</sup>. After approx. 8 - 10 hours, once dried the first coat, proceed with the application of a second coat with a consumption of 150 g/m<sup>2</sup>.

We recommend to wait at least 48 hours for the complete drying of the two previous coats; then make a light sandpapering and proceed with the application of one finishing coat called TOP COAT PER FIREBLOCK EU in amount of 50 g/m<sup>2</sup>. The total quantity of the product applied, therefore, amounts to 350 g/m<sup>2</sup> distributed over three coats.

CICLO FIREBLOCK® EU can be applied by brush, roller or spray by airless devices without filter (nozzle diameter: 0,28 – 0,38 mm).

For any information not mentioned above, please look at our technical data sheets.

- 
- 1) Indicate the type of wood support to treat (wall, matchboard, false ceiling, etc.) and the quality of the wood used (fir, beech, oak, etc.)
  - 2) Indicate the application system used (spray, brush, roller, etc.)
-
